

Mobile Tanker Manufacturer Selects CHEMCLAD XC For Its Superior Acid Protection

This manufacturer of mobile tankers located in Texas needed a coating system that could withstand 35% Hydrochloric Acid.

After evaluating a number of high performance coating systems they selected CHEMCLAD XC to protect this newly constructed tanker.

Four coats of the XC (about \$4,500) were applied by roller and brush by the company's own personnel under the watchful eye of their local ENECON Field Engineering Specialist.

The company was very pleased with the results and they have decided to standardize on the XC for future acid protection on their tanks.
