

Major Airline at New York's JFK Airport Keeps Their Boiler Burning Cleaner and More Efficiently With ENEFLOW

A major international air carrier at JFK Airport in New York kept its oil-fired (#6 oil) boiler burning cleaner and more efficiently with the help of ENEFLOW Fluid Dynamic Power Cells.

Installed on the oil line, the ENEFLOW Power Cells have been helping to keep the burner gun operating cleaner, with less maintenance related down-time.

More complete combustion also means better fuel efficiency... and that means additional cost savings to the airline!
