

Oil Tanker Fuel Transfer Pump Reconditioned and Protected with METALCLAD CeramAlloy for Philippines Transport Company

ENECON's Philippines Distributor, Kambal Industrial Supply, based near Manila, supplied these project photos highlighting a recent application to a large gear pump on an oil tanker used to transport gasoline, fuel oil and other petroleum products.

Previous coating products provided only limited performance so the owners of the transport company turned to their local ENECON engineering team to provide a long-term solution.

CeramAlloy CP+ [AC] and CL+[AC] were used to repair and then resurface this large casing to the complete satisfaction of the transport company's engineers.
