

**ENECON's DuraGrip System Installed At A Major U.S. Airport 8 Years Ago Still Providing Outstanding Performance Even After MILLIONS Of People Have Walked Over It!**

These DuraGrip non-skid pads were installed inside one of the world's busiest airport air train terminals.

The local transit authority estimates about 1.8 million passengers use this terminal every year.

After 8 years in service approximately 14 million pairs of feet may have walked on these DuraGrip pads.

This project was completed with ENECLAD SPS, ENECLAD CFS, and aluminum oxide in just 7 hours and the entire application cost under \$5,000.
