

Major Power Station Located in Southern California Selects DuraTough to Protect New Pump Impellers

This large power plant has been a satisfied ENECON client for many years. They have successfully completed hundreds of thousands of dollars of ENECON repair and protection projects.

They now have begun using ENECON high performance materials for preventive maintenance.

This spare cooling water impeller was coated with FLEXICLAD

DuraTough in order to protect it from the severe cavitation and ocean debris that it will experience when placed in service.
