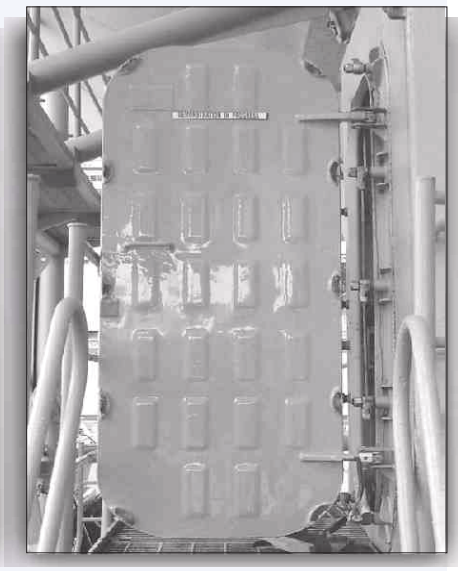
CHEMCLAD SC Provides Significant Performance Improvements Over Powder Coating on US Navy Aircraft Carrier Watertight Doors

Powder coated door after a few months at sea.



Same door protected with CHEMCLAD SC

CHEMCLAD SC advantages...

- >No special tools are required - just a roller & paint brush.
- >No odors & no health or environmental risks.
- >Superior adhesion to the steel prevents under-film corrosion (rust creep).
- >Any physical damage to the CHEMCLAD system remains isolated and can be easily repaired in the field by ship's force - not possible with powder coating.
