40 Year Old Sewage Tank Undergoes Major Refurbishment With CHEMCLAD SC

This 40 year old steel influent sewage tank located at a waste water treatment facility in the Northeastern U.S. was suffering from severe corrosion.

The local ENECON Northeast Engineering team was called in to provide a fast, cost effective solution. The tank was first blasted, followed by DurAlloy repairs to severely pitted areas. This was followed by an application of two coats of ***CHEMCLAD SC***.

The facility engineers were extremely pleased with the final results as this $50k+ project was completed on-time and under budget.
