Coal-Fired Power Plant In Chile Protects Concrete Floor With CHEMCLAD

The concrete floor in this electrical switch room at a coal-fired power plant in Chile was in need of repair after years of deterioration.

ENECON Chile was called in to prescribe a solution. It was decided that CHEMCLAD SC was the right product for this application.

After grit blasting, ENECRETE DuraFill was used to level the floor as well as a primer.

2 coats of CHEMCLAD SC in 3 different colors were then applied; gray, safety yellow and a custom blue color specified by the power plant.
