

ENEFLOW Power Cells De-Scale Boiler at a Popular Dry Cleaner Located in Central Pennsylvania

This busy central Pennsylvania dry cleaner was troubled with mineral scaling in the boiler due to the hard water in the area.

“Chemical treatments are not an option as they are too costly and require too many man-hours to be effective,” according to the company’s maintenance supervisor.

Pete Hoffman, ENECON’s exclusive Sales Representative in the area, suggested an unconventional, yet very cost effective solution: *ENEFLOW Fluid Dynamic Power Cells*.

Two pair of ENEFLOW 1000’s were installed and the dramatic “before” & “after” pictures speak for themselves.

Scale Problem Solved!
