

11 Years & Still Counting,... CeramAlloy Continues to Protect Aircraft Carrier AFFF Stations

“As far as the AFFF coating, we are amazed that it still looks so good after approximately 11 years. I had no idea that coating was that old” was the comment made by the Damage Control Assistant on this nuclear powered aircraft carrier.

The **ENECON News** shown on the right was

published in 2008 to highlight the excellent performance of our CeramAlloy CL+AC on these AFFF stations after 5 years in service.

Now, after 11 years, the CeramAlloy is still in perfect shape and continues to provide outstanding corrosion protection to these critical areas.
